

# Technical Assessment

Create a **React frontend** and **Spring Boot backend in Java** with the following functionalities.

1. Upload a CSV file with appropriate feedback to the user on the upload progress.
2. List the data uploaded with pagination.
3. Search data from the uploaded file.

The web app should be responsive and provide sufficient feedback for the user to know the progress of the file upload, listing of data and searching of data.

## Submission

In your submission, must include the following:

1. Use data.csv file from archive.zip
2. Include unit tests with complete test cases including edge cases.
3. Provide a git repository for us to assess your submission.
4. Provide a readme in the git repository on how to setup and run the project.

After the submission, we will arrange a session with you to walk us through your solution.
